

Description & Justification

- 1** Infrastructure - AWS
Our production environment is entirely in AWS. Most of us are familiar with AWS and they provide an awesome free tier.
- 2** Database – DynamoDB
Stick with AWS stack – DynamoDB is simple to setup and we don't have to deal with SQL.
- 3** Back end – Flask
Flask is a relatively lightweight framework. It uses Python which is easy to learn and familiar to some of us.
- 4** Mobile client – Android
All of us have experience building Android application in the past.
- 5** Web client – Angular 5
Angular is a popular JavaScript framework for building web applications. Some of us have experience building Angular applications.
